

Aidan Schrier

Software Engineer— Automation, Backend Development & Internal Tools

Issaquah, WA | (425) 894-4556 | schrierav@gmail.com | [Linkedin](#)

CORE COMPETENCIES

Programming Languages: Python, Go, Kotlin, Java, TypeScript, JavaScript, C, D

Backend & Cloud Tools: Python, Go, REST APIs, Azure-hosted services, Docker, CI/CD, Datadog, AWS Step Functions

Data: MySQL, MongoDB; academic experience with Pandas

Development & Operations: Docker, Git, CI/CD, Datadog, AWS Step Functions, academic experience with Linux

Development Practices: Code Reviews, Test-Driven Development, Pair Programming, Agile Methodologies

Engineering Practices: Automated testing, code review, technical documentation, stakeholder collaboration

PROFESSIONAL EXPERIENCE

Zinnia TV, Remote - Contractor

Oct 2025-Present

Developed a Python-based cloud-native application to make an existing media-production workflow easier to operate

- Built a service deployed in Azure to support automated media-processing workflows for an internal production application.
- Implemented queued and containerized processing for long-running media-generation tasks.
- Compared local and cloud-hosted deployment approaches based on operating cost, maintainability, reliability, and the needs of a low-volume internal workflow.

Oleria, Bellevue, WA - Software Development Intern

Mar 2025-Jun 2025

Contributed to a security platform for role-based access control (RBAC)

- Designed and shipped a Go microservice transforming GitLab RBAC events for 30k+ users and repositories into internal access-control schemas
- Investigated pipeline failures using Datadog dashboards, traces, and logs, identifying reliability and data-quality issues across service boundaries.
- Authored internal documentation clarifying event schemas, data flows, and debugging procedures

Zinnia TV, Remote - Software Development Intern

Apr 2024-Feb 2025

Interned with age-tech video platform to design production applications for generative AI in their workflow

- Architected a video-generation pipeline integrating generative AI into a repeatable, human-reviewed production workflow
- Delivered 93% efficiency improvement, reducing manual production time by 30+ hours per content set through automated pipeline generation

Northeastern University, Boston, MA - Teaching Assistant

Sep 2023-Apr 2024

Led technical instruction for 30+ students in introductory Computer Science and Object-Oriented Design courses

- Evaluated coding assignments and delivered actionable feedback to help students improve code quality and design skills
- Facilitated office hours and provided individualized support through 1:1 tutoring sessions with five students weekly

Iwate Board of Education, Morioka, Iwate, Japan - Assistant Language Teacher

Aug 2019-Sep 2021

- Worked effectively in cross-cultural teams, coordinating with faculty and administrators across five schools
 - Designed and taught lessons for 200+ English learners across grade levels 1-9
 - Authored training manual for next generation of English teachers, including lesson plans and best practices.
-

EDUCATION

Master of Science in Computer Science, Northeastern University, Boston, MA

Dec 2024

Relevant Coursework: Algorithms, Linux, Pandas, Machine Learning, Database Management

Bachelor of Arts in Psychology, Minor in Japanese, Earlham College, Richmond, IN

May 2019

Relevant Coursework: Education, Linguistics, Research Methodology, Statistics

PROJECT EXPERIENCE

2D Multiplayer Game Server - D Language. Northeastern University

Oct-Dec 2023

- Collaborated in agile development team to architect server-based multiplayer game environment with real-time capabilities
- Delivered game system on accelerated timeline using iterative development and continuous integration practices
